

Eggplant KALENDA F1

Solanum melongena L.

Thanks to its resistance to Anthracnosis and to its high tolerance to bacterial wilt, this open field hybrid can provide an abundant and good production in difficult hot and humid conditions. Furthermore, its excellent behaviour toward *Phomopsis vexans* makes it even more adapted to hot and wet conditions.

Its deep shining purple and its homogeneous size has satisfied for a long time long eggplants producers. KALENDA F1 is also resistant to TMV (O) (Tobacco Mosaic Virus) and to CMV (Cucumber Mosaic Virus).

FRUIT

- Long, cylindrical and bulbous
- Deep purple
- Average weight : 300 to 450 gr
- Length : 20 to 22 cm
- Diameter : 7 to 8 cm

MATURITY

- 75 to 80 days

PLANT

- Open field

RESISTANCES/TOLERANCES

- Bacterial wilt (*Ralstonia solanacearum*)
- Anthracnose (*Colletotricum lagenarium*)
- TMV (Virus de la Mosaïque du Tabac)
- CMV (Virus de la Mosaïque du Concombre)
- *Phomopsis vexans*
