

*A heat-resistant variety*

## Carrot TALENA F1

*Daucus carota L.*

This Kuroda type carrot is very well adapted to hot conditions. With its high level of tolerance to Alternaria Leaf Blight, TALENA F1 is very productive. This variety also provides a good uniformity and a good taste quality.

### PLANT

- Strong foliage
- Good tolerance to Alternaria Leaf Blight (*Alternaria dauci*)

### ROOT

- Regular tapered shape
- Average length: 17-19 cm
- Attractive orange colour skin

### MATURITY

- Early: 95-100 days from sowing to harvesting
